Exercise 1

On the POI details screen, replace the *TextView* which textually displays the rating (id *poi_rating_view*) with an Android widget designed specifically for showing a rating in stars, *RatingBar*.

Hint: Consider if the *RatingBar* should allow for user interaction or not, in this case.

Exercise 2

Currently, the "View reviews" *Button* on the POI details screen does nothing. Implement a new *Fragment* for displaying user reviews. Use your imagination for the UI. Then, hook up the previously mentioned button to navigate to it.

Hints:
- Modify *PoiData.kt* to include user reviews
- A "review" object might contain properties such as a unique id, rating, title, comment/text, date created, and so on (use your imagination)
- Think about what data needs to be passed as fragment arguments
